PROFILE

Senior Product Designer with 6 years of experience in B2B platforms, now focused on design systems. I currently lead design for **NokGridCore, an open-source dashboard design system with 400+ tokens, 69 components and a live Storybook**, built on primitive to semantic tokens, light and dark modes, and a Figma to code pipeline. Before that I led OneCart's internal design system (SystemOne) and built its multi-brand theming. I work directly with frontend developers, write HTML, CSS and JavaScript, and use Claude Code and the Figma MCP in my design to dev workflow. Products I have shaped have processed over $25M in transactions.

WORK EXPERIENCE

Design Lead, NokGridCore (Open-Source Dashboard Design System)

Remote · Aug 2025 – Present
nokgrid.vercel.app · Storybook · Case study · npm: @nokgridcore/ui

- Audited **25+ dashboard products across analytics, marketing, finance, CRM and e-commerce**, going hands-on in six (Amplitude, Looker Studio, Tableau, Grafana, Mixpanel, Heap) and reviewing 15+ more (Semrush, HubSpot, Shopify, Stripe, Xero), to find which patterns dashboards really share.
- Logged and compared the findings in a research database: **88 audit entries synthesised into 80+ patterns** across tables (7), KPI cards (5), charts (19), filters and inputs (37), navigation (5) and feedback (4).
- Used the audit to decide what to build first. **KPI cards and tables appeared in every audited product and breadcrumbs in fewer than half**, so research frequency set the P1 and P2 build order instead of opinion.
- Defined a Family.Type.Variant naming system (KPI.Value.Delta, Table.Log.Expandable) so components read the same in Figma, Storybook and code.
- Designed a two-layer token architecture (primitive to semantic) in Figma Variables and synced it to code with Token Studio and Style Dictionary, giving **400+ tokens with light and dark modes from one semantic layer** and no hard-coded values.
- Built the Figma component library and specified every component for engineering, working with the React developer, which delivered **69 components in v1.0** with Storybook documentation covering states, usage and accessibility notes.
- Shipped **v1.0 live, with @nokgridcore/tokens and @nokgridcore/ui published to npm under an MIT licence**, in a Turborepo and pnpm monorepo with GitHub versioning and changesets.
- Set the success targets: **5% or less design to code variance, 90% or more dashboard pattern coverage, and at least one production dashboard** using the system.
- Used Claude Code, Cursor, Figma Dev Mode and the Figma MCP to speed up handoff and check built components against the design.

Senior Product Designer, Scrums.com (Embedded with OneCart)

Remote · May 2022 – Present

- Led OneCart's internal design system (SystemOne) as the sole designer working with 2 engineers. When budget ruled out Token Studio, **built a multi-brand theming pipeline and delivered a proof of concept that enabled brand-level theming across the product at no extra tooling cost.**
- Led the redesign of Spotlight OMS, an internal operations platform used by **100+ agents and supervisors monitoring 20,000+ daily orders**. Defined a status and badge architecture that separates workflow progress from attention signals, and rebuilt role-based visibility across multiple user types.
- Redesigned discovery and search across 6 to 7 retailer inventories, with a unified taxonomy, cross-store fuzzy search and a CMS-driven homepage, **contributing to 29% average YoY customer growth and 18% average YoY revenue growth (2023 to 2025).**
- Redesigned the post-order journey into a seven-state customer status system with channel-aware notifications, **contributing to 27% average YoY growth in returning users** and fewer order-related support queries.
- Designed a wallet refund and fraud prevention system that separated customer wallet balance from platform credit, **reducing coupon fraud cases by 20%.**
- Added a Validator feature to the Shopper App for order checks at handoff, **improving on-time delivery by about 10%.**
- Led UX for new store opening workflows, **overseeing 8 store openings in the last year that supported over 15,000 orders.**
- Worked with engineers and PMs to define scalable UX patterns and align design decisions with backend architecture.

Product Designer (Enterprise Platforms), Maon Technology

Nigeria · Sep 2021 – Jan 2023

- Designed a nationwide operations dashboard used by **10,000 sales representatives across 40,000+ retail outlets**, standardising data views and role-based hierarchy.
- **Reduced manual reporting and spreadsheet dependency by 35 to 45%** with centralised, real-time operational views.
- Redesigned the outlet onboarding flow, **reducing sign-up drop-off by 30%.**
- Designed a Bundle feature, **contributing to a 12% increase in sales**, and a marketing CMS for targeted ads, **contributing to a 10% increase in average order value.**

Product Designer, Vertex Hub

Nigeria · Jun 2021 – Apr 2022

- Designed a P2P e-commerce mobile application end to end, from information architecture to high-fidelity UI.

SELECTED PROJECTS

CrowdSync, Event Operations and Payments Platform

Founder / Product Designer

Designing and building an event operations platform covering self-serve onboarding, ticketing, role-based access and payouts. **Processed eight-figure transaction volumes in year one.** Active development with a CTO co-founder.

SKILLS

Design Systems: Design Tokens (primitive, semantic) · Multi-brand Theming · Component Architecture · Figma Variables and Modes · Documentation · Governance · Adoption

Tools and Code: Figma · Figma Dev Mode · Figma MCP · Token Studio · Style Dictionary · Storybook · HTML · CSS · JavaScript · Claude Code · Cursor

Product: Dashboard UX · Internal Tools · B2B SaaS · UX Research · Prototyping · Accessibility · Agile/Scrum · Cross-functional Collaboration

LICENSES & CERTIFICATIONS

Design System 101
Make Design System People Want to Use
HTML & CSS
Agile Methods for UX Design · Interaction Design Foundation (IxDF), May 2024
Interaction Design for the Web
UX Foundations: Usability Testing · LinkedIn, Sep 2021

EDUCATION

B.Sc. Biochemistry, Imo State University, Nigeria
